

Hurricane Rita Report - Second in the 2005 Hurricane Report Series from CompuWeather Now Available

Dear Attorney and Claims Professional:

In September, CompuWeather was the first to release a comprehensive Hurricane Katrina report that detailed and analyzed the storm and damage it produced. Many commented that this report helped make their job easier and saved them many hours of precious time by providing them with a complete step-by-step analysis and overview of the storm.

Due to incredibly popular demand and an overwhelming response to our first report, CompuWeather has prepared their 2nd detailed hurricane report for 2005. This report details Hurricane Rita and the path that affected Southern Florida and the Louisiana-Texas Coastlines.

CompuWeather's expert team of forensic meteorologists have researched all available Hurricane Rita data and comprised a 70-page detailed report available for delivery to you now.

The report includes: Radar & Satellite Images, Wind Swath Maps, Wind Analysis and Observations, Rainfall Totals and Rainfall Rates, Storm Surge, Graphic track analysis, including "M.E.O.W" (Maximum Envelope of Winds Graphics), Actual Wind Speeds Measured, Public Storm Reports, National Weather Service Issued Watches and Warnings, National Hurricane Center Advisories, Tornado Reports and more.

LIMITED TIME OFFER - Receive **\$100** off and **FREE Overnight Shipping** when purchasing both the Katrina and Rita Reports at the same time. Existing clients that have already purchased the Hurricane Katrina Report automatically qualify for \$100 off of the Hurricane Rita Report.

To place an order or for more information please contact our severe weather consultant, Patti Robertson, at 1-800-825-4445, or email: experts@compuweather.com
